#### 1. CHILDREN & YOUTH OUTPATIENT SERVICES

*(Healing Trauma in Children, Youth and Adults using CBT Interventions)*

Trauma-focused cognitive behavioral therapy (TF-CBT) is an evidence-based treatment model designed to assist children, adolescents, and their families in overcoming the negative effects of a traumatic experience. This evidence-based method has been proven effective for treatment after multiple traumas or a single traumatic event. Therapists trained in TF-CBT are frequently able to help children experiencing the emotional effects of trauma address and resolve these effects.

##### How TF-CBT Works

In TF-CBT, interventions are specifically tailored to meet the needs of children, adolescents, and adults experiencing emotional and psychological difficulties. Both parents and children may become able to better process emotions and thoughts relating to a traumatic experience through TF-CBT, which can provide those in therapy with the necessary tools to alleviate the overwhelming thoughts causing stress, anxiety, and depression.
